

Dr. Saxena Center Integrative Medicine Pvt Ltd offers comprehensive integrative and preventive health care for men, women and children with a focus on treating the underlying cause of health challenges instead of masking or suppressing symptoms. For example, if a patient comes to our center with the symptom of a headache, we do not routinely prescribe aspirin to resolve the headache. Instead, we diagnose and treat the underlying physical reason why the patient has the headache in the first place, by utilizing innovative lab testing and symptom analyses that point to the root cause of the symptoms. By doing so, we resolve the patient's condition rather than masking or suppressing the symptom with potentially damaging chemicals

Cryolipolaser

PROVIDING NEW POSSIBILITIES IN THE
QUEST FOR WELLNESS

hyperbaric therapy

Transportation of Oxygen in the Human Body Under Hyperbaric Conditions

Oxygen (O₂) molecules become smaller under hyperbaric pressure and therefore more soluble. The smaller size allows oxygen to dissolve into all body fluids - plasma, cerebrospinal, interstitial, lymphatic, and synovial.

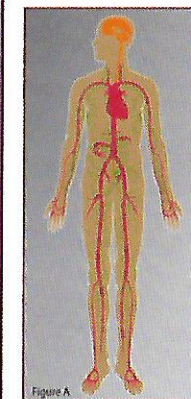

Figure A

Figure A shows the circulatory system (red), lymphatic system (green), and brain and spinal cord (orange) under normal conditions. O₂ is transported only by red blood cells.

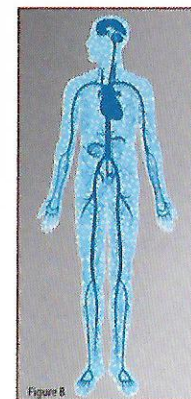

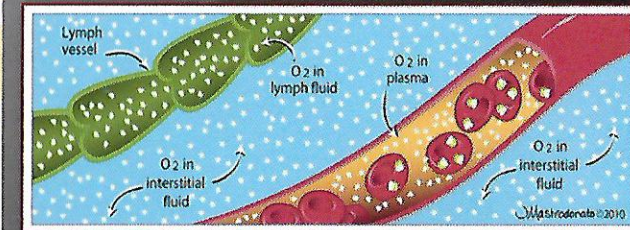

Figure B

Figure B shows the body under hyperbaric conditions. All body fluids carry O₂ and saturate the body with oxygen.
