Docs, activists raise red flag on environmental toxicity

Times News Network

Venkat Rao M

Retired IAS officer Mohan Kanda discusses with Dr Praveen Saxena, director of Centre for Progressive Medicine, during a seminar on Toxicity at Fapcci in the city on Sunday

Hyderabad: Expressing alarm at the rising level of environmental toxicity, doctors and activists said drastic changes in the living conditions of citizens is long overdue. Speaking at a seminar on 'Toxicity in City' on Sunday, they drew attention to the health problems due to the poor environmental conditions and said growth and development has come at a huge cost.

"The onset of diseases like diabetes and cancer in young people these days is attributable to several factors other than stress. Environmental toxicity caused due to increased concentration of heavy metals and chemicals is one such contributing factor," said Praveen Saxena, director of Center for Progressive Medicine, which organized the seminar. Saxena added that most people are unaware of the extent of damage that even commonly-used kitchen appliances and household items like cell phones can cause.

Retired scientist K Babu Rao, also cited several instances of contamination. Recalling instances like the inflow of hexavalent chromium into river Krishna and expansion of the asbestos industry in the state, he stressed on the need to immediately opt for sustainable living.

Meanwhile, Surrendra Varma, deputy director of Federation of Indian Chambers of Commerce and Industry (FICCI), said that though erstwhile And... disposal of hazardous waste, many industries which pose risks do not follow emergency or healthcare norms. "There is a need for a disaster management plan in industrial centers and creation of medical facilities to fall back on during emergencies," he said. Setting up of environmental standards to test toxicity or purity has not been done effectively in the country, pointed out Mohan Kanda, former member of the National Disaster Management Authority. Without defining standards, it is difficult to tackle toxicity, he explained. All the speakers at the seminar said they would support the Center for Progressive Medicine to reach out
