What to Expect

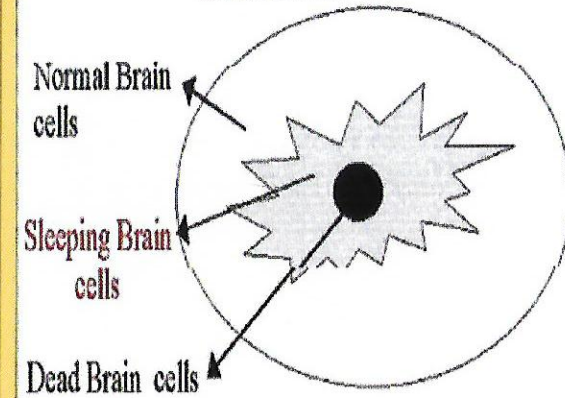

First we will meet with you to determine your particular needs. We will review your medical history and discuss what you want to achieve with each treatment. Treatment frequency is determined on an individual basis, as each patient has different needs. We recommend discussing this with your practitioner on your first visit.

We all want to live long healthy lives, to be able to play tennis in old age, run on the beach and interact with our grandchildren. Up to early middle age, proper nutrition and exercise may suffice to keep us fit and feeling well. For some individuals, the gradual decline of our anabolic hormones may express itself as tiredness, weight gain, insomnia and a lack of vitality. By replacing our declining hormones with exact replicas of our own, in doses that keep them at physiological levels, we may keep our tissues youthful, preserving bone, skin, muscle and brain tissue, keeping us feeling young and energetic with an improved quality of life. Anti-ageing medicine attempts to understand and treat our common ills, ranging from the superficial ageing appearance and weight gain, to the irritating female conditions such as menstrual, fertility and menopausal issues, and also to the life-threatening diseases of ageing, such as heart disease and osteoporosis.

A Natural Way to Heal HBOT- Hyperbaric Medicine

How does Hyperbaric Oxygen Act in

Brain conditions

Hyperbaric Oxygen acts by waking up the sleeping nerve cells

Oxygen (O₂) molecules become smaller under hyperbaric pressure and therefore more soluble. The smaller size allows oxygen to dissolve into all body fluids - plasma, cerebrospinal, interstitial, lymphatic, and synovial.

Under normal conditions, O₂ binds only to the hemoglobin (Hb) in red blood cells and is transported to the brain by blood supply.

Under hyperbaric conditions, the brain is saturated by oxygen, allowing O₂ to reach areas previously inaccessible by blood supply or blocked by damage.
